Issues to fix (28)

Medium Slow Largest Contentful Paint (LCP)

Largest Contentful Paint was 3.1 s in the mobile lab test (good is 2.5 s or less).

How to fix: Speed up the server response, preload or prioritise the hero image (`fetchpriority="high"`), serve it as WebP/AVIF at the right size, and remove render-blocking CSS/JS above the fold.

WordPress tip: Use a caching plugin with page caching, an image optimiser that serves WebP, and make sure the hero image is not lazy-loaded.

Medium No clickjacking protection

Neither X-Frame-Options nor CSP frame-ancestors is set.

How to fix: Send `Content-Security-Policy: frame-ancestors 'self'` (modern) and/or `X-Frame-Options: SAMEORIGIN` (legacy browsers).

WordPress tip: WordPress already sends X-Frame-Options on wp-admin and the login page, but not on the front end — add it in the server config or a headers plugin.

Medium WordPress usernames are publicly listed

/wp-json/wp/v2/users lists 5 user slug(s) to anonymous visitors.

How to fix: Restrict the users endpoint to logged-in users and use strong passwords plus two-factor authentication.

WordPress tip: Security plugins such as Wordfence or Solid Security can disable REST user enumeration, or filter `rest\_endpoints` to remove /wp/v2/users for logged-out visitors.

Medium Missing meta description

No meta description tag found.

How to fix: Write a unique 120–160 character summary that tells searchers why to click.

WordPress tip: Add it in the Yoast/Rank Math box under the editor, or set a template for each post type.

Medium No H1 heading

No H1 heading on the page.

How to fix: Add one clear H1 that matches the page topic.

WordPress tip: Many themes output the post title as H1 automatically; page builders sometimes turn it into a styled <div> — set the heading level to H1.

Medium Broken links

2 broken internal and 2 broken external link(s) found.

How to fix: Update or remove links that return 404/410 or server errors; redirect deleted pages to their closest replacement.

WordPress tip: The free “Broken Link Checker” plugin or Redirection plugin help find and fix them.

Medium Duplicate page titles

1 title(s) are shared by more than one page.

How to fix: Give every page a unique title describing its own content.

WordPress tip: Set title templates in Yoast/Rank Math and override them for pages that collide.

Medium Pages without meta descriptions

24 of 24 other indexable page(s) have no meta description.

How to fix: Add a 120–160 character description to your important pages.

Low Render-blocking scripts and stylesheets

2 blocking script(s) and 10 stylesheet(s) in the page head.

How to fix: Add `defer` to scripts that don't need to run early, inline small critical CSS, and load the rest asynchronously.

WordPress tip: Plugins like Autoptimize, Perfmatters or FlyingPress can defer JS and inline critical CSS; WP 6.3+ supports `strategy => defer` in `wp_enqueue_script`.

Low Images not in modern formats

9 of 9 images are JPEG/PNG/GIF without a WebP/AVIF alternative.

How to fix: Serve WebP/AVIF (with `<picture>` fallbacks if you need them) or let an image CDN negotiate the format.

WordPress tip: WordPress 5.8+ handles WebP uploads; an optimizer plugin can convert existing media in bulk.

Low Heavy images

1 sampled image(s) are over 400 KB.

How to fix: Resize images to the size they're shown at, compress them, and serve WebP or AVIF.

WordPress tip: Use an optimizer such as EWWW, ShortPixel, Imagify or Converter for Media to compress and convert to WebP/AVIF automatically.

Low Web fonts may block text rendering

Google Fonts URL without `&display=swap`: <https://fonts.googleapis.com/css?family=Lato:400,700%7CLibre+Baskerville:400,700,ital@0;1&ver=1.0.0>

How to fix: Add `font-display: swap` to `@font-face` rules, or `&display=swap` to Google Fonts URLs. Self-hosting fonts saves extra connections too.

Low No security.txt file

`/.well-known/security.txt` was not found (or has no `Contact:` line).

How to fix: Publish `/.well-known/security.txt` with at least a `Contact:` and an `Expires:` line.

Low No Content-Security-Policy

No Content-Security-Policy header.

How to fix: Start with a report-only policy, then enforce. A practical baseline: ``default-src 'self'; frame-ancestors 'self'; object-src 'none'; base-uri 'self'; upgrade-insecure-requests``, adding the third-party hosts you actually use. Prefer nonces or hashes over `'unsafe-inline'`.

WordPress tip: WordPress core and many plugins rely on inline scripts, so a strict CSP takes testing. Begin with ``frame-ancestors 'self'; object-src 'none'; base-uri 'self'; upgrade-insecure-requests`` — safe on almost every WP site.

Low X-Content-Type-Options missing

X-Content-Type-Options: nosniff is not set.

How to fix: Send ``X-Content-Type-Options: nosniff`` on all responses.

Low No Referrer-Policy

No Referrer-Policy header.

How to fix: Send ``Referrer-Policy: strict-origin-when-cross-origin``.

Low No Permissions-Policy

No Permissions-Policy header.

How to fix: Send e.g. ``Permissions-Policy: camera=(), microphone=(), geolocation=(), payment=(), usb=()``, allowing only what you need.

Low XML-RPC is enabled

/xmlrpc.php responds (405).

How to fix: If you don't use the WordPress mobile app, Jetpack or remote publishing, block xmlrpc.php at the server.

WordPress tip: Block it in nginx (``location = /xmlrpc.php { deny all; }``) or .htaccess, or use the ``xmlrpc_enabled`` filter.

Low No DMARC record

No DMARC record at `_dmarc.wptavern.com`.

How to fix: Add a TXT record at ``_dmarc.yourdomain`` such as ``v=DMARC1; p=none; rua=mailto:dmarc@yourdomain``, review the reports, then tighten to ``p=quarantine`` or ``p=reject``.

Low No structured data

No JSON-LD or microdata found.

How to fix: Add JSON-LD for your organisation/website, plus the type that fits each page (Article, Product, LocalBusiness...). Check it with Google's Rich Results Test.

WordPress tip: Yoast/Rank Math output Organization and WebSite schema; WooCommerce adds Product schema.

Low robots.txt doesn't list a sitemap

No "Sitemap:" line in robots.txt.

How to fix: Add `Sitemap: https://yourdomain/sitemap.xml` (absolute URL).

WordPress tip: Yoast and Rank Math add it automatically to the virtual robots.txt.

Low Internal links point at redirects

9 internal link target(s) redirect.

How to fix: Update internal links to point straight at the final URL.

Low Pages without an H1

2 page(s) have no H1 heading.

How to fix: Give each page one descriptive H1.

Low Thin pages

2 page(s) have fewer than 200 words of visible text.

How to fix: Expand them with genuinely useful content, merge similar pages, or noindex utility pages.

Info Duplicate element IDs

3 id value(s) are used more than once.

How to fix: Make every id attribute unique on the page.

Info No IPv6 address

wptavern.com has no AAAA record.

How to fix: Add an AAAA record if your host or CDN supports IPv6.

Info Not ready for the HSTS preload list

For preload the header still needs: includeSubDomains, preload.

How to fix: Serve `max-age=31536000; includeSubDomains; preload` on the root domain, redirect http→https on the same host first, then submit at hstspreload.org.

Info No CAA record

No CAA records for wptavern.com — any public CA may issue certificates.

How to fix: Add e.g. `yourdomain. CAA 0 issue "letsencrypt.org"` for each CA you use (check your CDN's required CAs first).

Passed checks (27)

Valid SSL certificate · HTTP redirects to HTTPS · HSTS enabled · No mixed content · Fast server response · Brotli compression · HTTP/2 supported · Lean HTML · Off-screen images are lazy-loaded · Static files are cacheable · Page loads successfully · Page is indexable · Good page title · Canonical URL set · Mobile viewport set · Open Graph tags present · robots.txt allows crawling · XML sitemap found · Missing pages return 404 · One preferred hostname · Page language declared · All images have alt attributes · Form fields are labelled · Links and buttons have names · Logical heading structure · Standards-mode HTML5 document · SPF record present
